# Waste Management Plan Template

### **Event Details**

Event name	Event Date/Time	
Set up waste area date/time	Pack up waste area date/time	
Event location	Event Manager / Contact No.	
Description of event	Alternative Events Person Contact No.	
Crowd numbers expected	Target audience	
Emergency Assembly point	First Aid person / contact no	
Nearest A & E Medical Centre /Ph	Nearest Fire Extinguisher – If app	

• Site visit done Yes / No

• Site map/event layout with waste stations included – attached – Yes / No

## Waste Management Details

How many waste stations will there be and where?		What type of waste will be generated? Include vendors and stall waste.	
What equipment is needed?		How will the waste be removed from event site?	
Who will be in charge of waste management?		How will successful waste management be measured?	
What initiatives are in place to divert waste going to landfill.			
Briefly describe your:	1.		
1.Pre-event 2.Event 3.Post event	2.		
waste management plan.	3.		

## Waste Management Risk Control Plan

#### Please include any specific risks associated with waste at the event. E.g. hazardous waste materials

(A) Hazard – what could cause harm	(B) Risk – potential harm caused by the hazard	(C) Actions/controls to reduce the risk	(D) Level of risk after controls are in place (Score = Likelihood x Consequence)	(E) To be actioned by / Contact No.

#### Likelihood and Consequence Table (Column E)

**Risk score and level of risk -** The table below shows how to assess the **likelihood** and **consequence** of each identified risk and therefore show the **risk score** and the **level of risk. Eg:** The likelihood the risk is identified as unlikely which gives a rating of 2 and the consequence of the risk would be moderate which gives a rating of 1.5. To get the risk score you multiply the likelihood of 2 by the consequence of 1.5,  $(2 \times 1.5 = 3)$ . The risk score is 3 which inicates the level of risk is moderate (as per the table below).

Likelihood (L)	Definition	Consequence (C)	Definition	Risk Score	Level of risk	Description
1 Rare	Once every 10 years, never heard of it happening	0.5 Less than Minor	Minor injury, first aid not required	0-1.5	Low	While control issues may still exist at this level, their impact will be low.
2 Unlikely	Event will seldom occur i.e. every two years	1 Minor	First aid or minor treatment	2-4	Moderate	This level of risk is still considered unacceptable in certain circumstances.
3 Possible	Event will intermittently occur i.e. annually	1.5 Moderate	Medical treatment required	4.5-8	High	Require attention with a degree of priority. Remedial action should be identified and implementation commenced with appropriate priority.
4 Likely	Event will occur in most circumstances i.e. monthly	4 Major	Notifiable injury or illness, broken bones, hospitalisation	10-16	Critical	This level of risk also requires immediate attention and should not proceed without clear and timely action plans identified to reduce the risk.
5 Almost certain	Event expected to occur in most circumstances i.e. daily	5 Extreme	Loss of life; multiple notifiable injuries or illnesses, permanent severe disability	21-25	Extreme	Stop, do not proceed with any risk at this level without specialist assistance to further treat/reduce risk including the possible development of contingency plans and/or risk transference strategies.
